

TEAM 12: UMKC LEASING (Appana Sravan Kumar

Architha Mukka

Maddula Manikanta

Padarthi Vikesh)

Motivation: New students when moved from other place face difficulties in finding accommodation and transport. An online leasing system will help students to find accommodation without any hassle.

Uniqueness: This application solely concentrates on helping a student rather than any commercial purpose.

Objectives: To build an application that help students finding accommodation.

System Features: UMKC leasing is the communication channel between leasing office and students. Through this application we can find available homes and details of it and a user can book a lease online. Reserved home information like rent, number of people taken lease is also present. The option called my home helps to find address and expenses of home. A user can even file a complaint online regarding any problem by a statement or image to UMKC officials via mail.

Backup Project1: (UMKC Forms)

A student should signup first in order to use this application. After entering login details a student can switch to either random questions on different topics or a particular subject so that user can post a question or else user can get answers for questions required. As, it contains numerous answers posted by different students.

Backup Project2: (WESHARE)

People can share a bill by forming a group in weshare using email ids/mobile numbers. When sharing the bill it provides option for user to select members within the group to share the bill. User can even upload image of the bill to other members in the group.
